MARKET UPDATE

JCI declined by 2.70% MoM to 6,752.21 at the end of trading day in October 2023. Foreign recorded an outflow of IDR7.9tn, spiked from September 2023 outflow of IDR4.1tn. The domestic equity market experienced correction caused by the weakening exchange rate of the Rupiah, higher bond yields and global equity correction. The US Dollar has strengthened on the back of a resilient US economy that threatens the current expected declining inflation trend. Additionally, higher oil price gives another challenge for The Fed to reach demanded inflation at 2%. Investors think the monetary policy of "higher for longer" can change the terminal rate to be different than expected before which shifts the assumption on when the last rate hike and how long it lasts at a high rate. Additionally, higher yields were also driven by the supply of bonds that were still high hence investors demanded higher yields to compensate for the risk. Higher bond yield and terminal rates affect discount rates in equity valuation, including Indonesian equity. Indonesian government has started to provide more subsidies and incentives to the economy such as rice subsidies, cash distribution and tax waivers for property.
